Dr Leschinskiy has provided evidence in Court on numerous occasions and has a number of witness summons pending for upcoming trial dates.

CLINICAL EXPERIENCE:

Dr Leschinskiy is a full-time Consultant in Pain Medicine and Anaesthesia. He qualified from State Medical University of Donetsk, USSR. He received further training at Bath and the London School of Anaesthesia. He is particularly interested in issues of functional restoration in pain patients and the role of opioids in non-malignant pain.

My expert fields are musculoskeletal back and neck injuries, neuropathic pain, including Complex Regional Pain Syndrome and Chronic Pain Syndrome. I see the patients with work related injuries and ongoing pain following road traffic accidents.

My Chronic Pain Management Team offers a Multidisciplinary approach. This includes pharmacological, educational, behavioural and interventional techniques. The pain management service specialises in providing advanced implantable neuromodulation therapies, cognitive and behavioural therapy and interventional pain management. My exposure and participation in the cognitive behavioural pain management program (PMP) is my belief that creation of such as a programme will significantly improve overall quality of a chronic pain service.

I have learnt how to organise and take a leading role in the Multidisciplinary Chronic Pain Management Service. Basildon Hospital is a recognized Centre of Excellence in Neuromodulation Training. I was involved in on-site tutorials and case presentations conducted for participants wishing to advance their skills in neuromodulation techniques both stimulation and intrathecal drug delivery. I have gained an invaluable experience treating patients with various chronic pain conditions including Complex Regional Pain Syndrome, Refractory Angina and Failed Back Surgery Syndrome (FBSS).
