MEDICO LEGAL EXPERIENCE:

Dr Castle has over 25 years of experience preparing Medico-Legal and expert psychiatric reports. His work includes complex assessments involving risk, substance misuse, personality disorders and antisocial behaviour. During these years, he has completed thorough, evidence-based reports covering psychiatric sequelae of head and spinal injury following road traffic accidents, and psychiatric disorders such as schizophrenia and delusional disorder.

For the past four years, he has produced an average of 60+ reports per year, with a cumulative total of over 1,000 cases covering both psychiatric and neuropsychiatric aspects of clinical negligence and personal injury claims. His caseload is split 70/30 between clinical negligence and personal injury matters, in which he regularly provides expert opinion on breach of duty, condition and prognosis, and causation.

He has extensive experience in the criminal justice system, having prepared numerous reports addressing psychiatric defences, fitness to plead, and Mental Health Act considerations. His forensic reports often involve detailed risk assessments and evaluations of the impact of illicit drug use, alcohol misuse, and personality difficulties.

Dr Castle remains actively employed within the NHS, where he runs a regional Neuropsychiatry Clinic and serves as Liaison Psychiatrist to the Pain Service. Specific NHS details can be provided upon request.

CLINICAL EXPERIENCE:

Dr Castle became a Fellow of the Society of Medicine in 2020. As a Consultant Psychiatrist, he served as Clinical Lead for a multidisciplinary team of 50 clinicians. In this role, he was responsible for the assessment and management of all acute psychiatric presentations.

Following this, Dr Castle took on the position of Principal Consultant Psychiatrist at a private psychiatric hospital, where he regularly managed a wide range of complex mental health conditions, including anxiety disorders, depression, personality disorders, and schizophrenia.

Dr Castle currently leads a regional Neuropsychiatry Clinic, offering specialist assessment and treatment for patients with complex neuropsychiatric conditions. Since 2021, his role has expanded to include serving as Liaison Psychiatrist to the Pain Service. This position involves the assessment and management of complex psychiatric, personality, and addiction disorders within the context of chronic pain, with a particular focus on the diagnosis and treatment of primary pain disorders.
